### PROFESSIONAL SUMMARY

Frontend Developer with 6 months of hands-on experience building production-grade **React.js** applications. Independently delivered the complete frontend for a live **e-commerce platform** serving an international client, covering **component-driven SPA architecture**, **REST API integration**, **JWT authentication**, and **Role-Based Access Control (RBAC)**. Strong focus on **responsive UI development**, **performance optimization** (lazy loading, code-splitting), and clean, reusable **component libraries**. Seeking a **Frontend Developer (React.js)** role to own UI development from day one.

### TECHNICAL SKILLS

**Core Frontend:** React.js, JavaScript (ES6+), Redux, Redux Toolkit, Context API, React Hooks, React Router, HTML5, CSS3

**Styling & UI:** Tailwind CSS, Responsive Web Design, Cross-Browser Compatibility

**API & Auth:** REST API Integration, Axios, JWT Authentication, Role-Based Access Control (RBAC), i18n

**Tools & Workflow:** Git, GitHub

**Familiar With:** Node.js, MongoDB

### PROFESSIONAL EXPERIENCE

**Frontend Developer Intern** — MyVyay Botmatic Solution Pvt. Ltd., Pune

Dec 2025 – May 2026

- Owned frontend development end-to-end as sole **React.js Developer** on a live, client-facing project — converting design specs into responsive components and driving all **REST API integration** for product-facing features.
- Managed delivery using a **Git feature-branch workflow**, tracking tasks against sprint requirements and syncing progress directly with the client to keep the 6-month release cycle on schedule.
- Built working proficiency in **JWT authentication and RBAC** patterns by studying the existing codebase and API documentation, translating that knowledge into independent implementation rather than guided tutorials.

**Zeux LifeSciences — Pharma E-Commerce Portal** (Mexico-based client)

*React.js, Redux, Tailwind CSS, REST APIs, JWT, i18n, Vite*

- Architected the SPA using **React.js and Redux** for global state management across 5 core modules — Product Catalog, Order Management, Admin Dashboard, User Management, and RBAC — with a reusable **component library**.
- Implemented **JWT authentication** and **Role-Based Access Control** to enforce granular permissions across admin and customer flows via **protected routes**.
- Optimized performance with **lazy loading**, **route-level code-splitting**, and **React.memo**; integrated **Axios**-based REST calls with **i18n** multi-language support and responsive **Tailwind CSS** layouts.

### PERSONAL PROJECT

**OpsFlow — DevOps Incident & Deployment Management Platform**

*React.js, TypeScript, Tailwind CSS, Node.js, Express, MongoDB* | [GitHub](#) | [Live Demo](#)

- Built a full-stack platform for managing incidents, deployments, alerts, runbooks, and analytics; owned **frontend architecture** as primary focus while independently building the supporting Express/MongoDB backend.
- Designed a single **API facade layer** that toggles between mock in-memory data and the live backend via an env flag with zero call-site changes — demonstrating strong **API abstraction and integration architecture**.
- Developed a **responsive, component-driven UI** with **TypeScript** and **Tailwind CSS** across dashboards, task views, and analytics screens.

### EDUCATION

**BSc Information Technology** - DBJ College, Chiplun

*Jun 2021 – Jun 2024*

**Full-Stack Web Development Certificate** - BitCode Technologies Pvt. Ltd.

*Jun 2024 – Sep 2024*
